

An Internship Report
of
InAmigos Foundation - WEB DEVELOPMENT

Submitted

To

School of Computer Science and Engineering

IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of

B.Tech (Computer Science and ENGINEERING)

By

Roll Number of Student:-25SCS1003004143

Name of Student:- ASHUTOSH RAY

Batch:- 2025-2029

CANDIDATES'S DECLARATION

I, ASHUTOSH RAY do hereby declare that the internship report titled has been "**Web Development**" completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard. This report presents the work plan, analysis approach, deliverables, and learning outcomes associated with the Web Developer Internship at InAmigos Foundation. The report is prepared from the internship offer letter and the assigned website-related tasks. The activities focus on AI-assisted website creation, website improvement analysis, user-experience thinking, and NGO website feature planning. The internship offer letter confirms the position of Web Developer at InAmigos Foundation, with a flexible working arrangement and primarily remote work. It also requires timely and responsible completion of assigned tasks and participation in team activities.

The major projects completed during the internship were:

- 1.Basic Setup for Task Completion
- 2.Personal Portfolio Website(Ai Based
- 3.E-Commerce Web Application
- 4.NGO Website Feature Highlights

Signature

Student Name :- ASHUTOSH RAY

Roll No.- 25SCS1003004143

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to **InAmigos** for providing me with the opportunity to undertake an internship in **WEB Development**. This internship provided me with valuable practical exposure to the development of modern web applications and helped me understand how different components of a software application work together. I am thankful to the mentors and team members associated with the internship program for providing guidance and project requirements throughout the internship. The project-based nature of the internship allowed me to apply theoretical concepts in practical development scenarios. I would also like to express my sincere gratitude to the faculty members and department of IILM UNIVERSITY, Greater Noida for their guidance and support during the internship period and in the preparation of this report. I am grateful to everyone who directly or indirectly supported me during this learning experience. The internship helped me strengthen my technical understanding, improve my problem-solving abilities, and gain practical experience in WEB development.

4. Introduction

Website creation is increasingly supported by artificial intelligence and no-code tools. These platforms make it

possible to create structured, visually consistent websites without writing every component manually. This task series combines three complementary activities: creating a personal online profile, evaluating an existing foundation website, and designing a feature showcase for an NGO website.

The reference internship report follows a project-oriented approach in which practical web-development work is documented through objectives, project descriptions, technologies, methodology, challenges, learning outcomes, and supporting evidence. This report follows the same academic style while focusing on the assigned AI/no-code and UI/UX tasks.

Objectives

- Learn how AI and no-code website builders can be used to create a professional web presence.
- Develop concise and professional website content for a personal profile.
- Analyze a real website from design, content, layout, usability, and accessibility perspectives.
- Identify important features that can improve an NGO/foundation website.
- Present recommendations visually through screenshots, annotations, and feature layouts.
- Develop practical UI/UX thinking and understand how design choices affect user actions.

5. Task 2 – Personal Profile Website (AI Based)

5.1 Task Overview

The objective of Task 2 was to create a personal profile website using Wix, WordPress, Google Sites, or another AI/no-code website builder. The website is intended to act as a simple professional online presence containing personal introduction, education, skills, projects or achievements, and contact/social links.

5.2 Proposed Website Structure

Home / Hero	Name, short professional introduction, tagline, profile visual, and primary call-to-action.
About / Education	Academic background, current B.Tech CSE programme, and short personal description.
Skills	Programming and technical skills presented using cards, icons, or grouped categories.
Projects	Academic/practical projects with short descriptions, technologies, and links where available.
Contact	Email/contact form and relevant professional social-media links.
Footer	Copyright, quick links, and social links.

5.3 Personal Profile Content

Introduction: I am Ashutosh Ray, a B.Tech Computer Science and Engineering student at IILM University, Greater Noida. I am interested in programming, web technologies, artificial intelligence, and practical software development. My goal is to continuously improve my technical and communication skills through projects and hands-on learning.

Education: B.Tech in Computer Science and Engineering – IILM University, Greater Noida.

Skills: C Programming, Python fundamentals, web-development fundamentals, problem solving, UI/UX awareness, AI-assisted productivity, and basic project development.

Projects: The profile can showcase academic/practical projects such as an AI/ML medicine recommender concept, website-development tasks, and other software projects completed during learning or internship activities.

5.4 AI-Improved Content

Suggested Tagline	"Learning. Building. Creating with Technology."
Hero Message	Computer Science student exploring AI, software development, and practical technology solutions.
Primary CTA	View My Projects
Secondary CTA	Contact Me

5.5 AI Usage

- Generate and refine the professional introduction and short bio.
- Suggest a concise tagline and call-to-action text.
- Generate section headings and project-description templates.

- Suggest page hierarchy, card layouts, typography, and visual consistency.
- Improve grammar, clarity, readability, and professional tone.

5.6 Design and Presentation

A clean one-page layout is suitable for a student profile because visitors can quickly scan the most important information. The visual hierarchy should prioritize the name and introduction first, followed by education and skills, then projects and contact information. Consistent spacing, readable typography, responsive cards, and clear buttons help create a professional impression.

- Use a limited color palette with one primary accent and a neutral background.
- Keep navigation simple: Home, About, Skills, Projects, Contact.
- Use cards for skills and projects to make information easy to scan.
- Use responsive layouts so the site remains usable on mobile screens.
- Use clear CTA buttons such as “View Projects” and “Contact Me”.
- Avoid excessive animation; use subtle transitions only where they improve feedback.

5.7 Publication and Submission Checklist

Website Builder	Wix / WordPress / Google Sites / selected AI website builder
AI Assistance	Content, tagline, layout ideas, design refinement
Responsive Check	Desktop, tablet, and mobile
Links	Verify email, GitHub/LinkedIn/social links before publication
Final Step	Publish website and add the live URL to the submission
Evidence	Add homepage and section screenshots to supporting documents

5.8 Expected Learning Outcome

This task develops an understanding of AI-assisted website creation, information architecture, visual hierarchy, responsive presentation, professional personal branding, and publishing a simple online profile.

6. Task 3 – Foundation Website Improvement Analysis

6.1 Website Reviewed

The supplied screenshots show the website of **InAmigos Foundation**. The visible interface includes a top navigation bar, Home/About Us/Campaigns/Get Involved/Contact links, a prominent Donate Now button, a hero section, feature cards, impact statistics, ongoing campaigns, testimonials, and a final call-to-action section.

6.2 Existing Strengths Observed

- Clear NGO-oriented visual identity using green as the dominant brand color and orange for donation actions.
- Top navigation is simple and contains the main visitor journeys.
- The Donate Now action is highly visible in the header.
- The hero section communicates a positive mission-oriented message.
- Donation and volunteer actions are prominent calls to action.
- Impact statistics provide a quick summary of organizational reach.
- Campaign cards communicate fundraising progress using progress bars.
- Testimonials are used to build social proof and credibility.

6.3 Screenshot Evidence – Home / Hero Section

Figure6.1: Supplied screenshot showing the InAmigos Foundation home/hero section and feature showcase heading.

Analysis

The hero section has a strong visual hierarchy: a large mission statement on the left, a supporting image on the right, and two primary actions below the message. The donation button is visually emphasized, while the volunteer action is presented as a secondary option. This structure supports two major visitor journeys—contribution and participation.

Recommended Improvements

- Add a short credibility line near the hero, such as focus area, location served, or verified registration information when available.
- Ensure the hero image has meaningful alternative text for accessibility.
- Consider a compact impact metric row directly below the hero to establish trust early.
- Test button labels and placement on mobile devices to ensure both actions remain easy to access.

6.4 Screenshot Evidence – Features, Campaigns and Impact

Figure 6.2: Supplied screenshot showing donation, volunteer, impact, campaign, and testimonial sections.

Observed Issues and Opportunities

- A campaign card visibly contains a broken/missing image placeholder. This should be replaced with a valid image or designed fallback state.
 - Impact numbers are visually strong, but a link to a dated/source-backed impact report would increase transparency.
- The testimonial is useful for credibility; adding context such as campaign supported or testimonial date can improve authenticity.
- Campaign cards should consistently display title, target, amount raised, percentage, deadline/status, and a clear action.
 - Feature labels such as “Donation → Easy Support” explain value, but should not compete with primary content.
 - Interactive elements should provide hover/focus states and keyboard accessibility.

6.5 Annotated Improvement Screenshot

Figure 6.3: Annotated analysis highlighting the broken campaign image and areas where trust/credibility information can be strengthened.

6.6 Detailed Improvement Recommendations

Design	Maintain the green/orange identity while improving consistency of spacing, card heights, image ratios, and button styles.
Content	Use concise descriptions and provide supporting details for campaigns, impact figures, and testimonials.
Navigation	Keep the main navigation short and make Donate/Volunteer paths immediately understandable.
User Experience	Reduce friction by keeping primary actions visible and using predictable page sections.
Accessibility	Add alt text, visible keyboard focus, sufficient contrast, descriptive links, and accessible form labels.
Mobile UX	Stack cards cleanly, keep buttons easy to tap, and verify that navigation collapses correctly.
Trust	Show impact-report sources, campaign status, transparency information, and appropriate organizational details.
Performance	Compress large images, use modern formats, lazy-load below-the-fold media, and avoid unnecessary scripts.

6.7 Suggested Page Flow

Header → Hero → QuickImpact → Donation/Volunteer → Campaigns → Impact Report → Testimonials → FAQ → Contact → Footer

This flow moves a visitor from understanding the mission to seeing evidence of impact and finally taking an action.

7. Task 4 – NGO Website Feature Highlight (Figma)

7.1 Task Overview

The objective of Task 4 was to create a Figma or similar visual design showing important NGO website features that could be implemented in the organization's website. The supplied feature-showcase screenshot demonstrates a strong starting point by grouping donation, volunteer, impact, campaign, and testimonial functions into visible cards.

7.2 Core Features Recommended

Donation Section	Secure donation CTA, campaign-specific donation options, suggested amounts, confirmation, and transparent use-of-funds information.
Volunteer Form	Simple registration form with name, contact, interests, availability, and preferred volunteering area.
Impact Showcase	Lives impacted, volunteers, campaigns, funds/utilization, and links to supporting reports where appropriate.
Campaigns	Current campaigns with goal, amount raised, progress, status, deadline, and action button.
Testimonials	Short supporter/volunteer stories with appropriate consent and context.
Events	Upcoming drives, community events, workshops, and registration links.
Stories / Updates	Recent activities, field stories, announcements, and outcomes.
Contact	Contact information, inquiry form, location/social links, and response expectations.

7.3 Feature Showcase Screenshot

Figure7.1:Feature-showcase design supplied for the NGO website task.

7.4 Feature Prioritization

- Priority1–DonationandVolunteer: direct conversion actions.

- Priority 2 – Campaigns and Impact: explain where support goes and demonstrate results.
- Priority 3 – Testimonials and Stories: add human context and social proof.
- Priority 4 – Events, FAQ, and Updates: support continued engagement.

7.5 Proposed Figma Layout

Frame 1 – Header	Logo, Home, About, Campaigns, Get Involved, Contact, Donate Now
Frame 2 – Hero	Mission statement + supporting image + Donate + Volunteer CTAs
Frame 3 – Feature Showcase	Donation, Volunteer, Impact cards
Frame 4 – Campaigns	Two or more campaign cards with progress and CTA
Frame 5 – Credibility	Impact report, testimonials, stories, transparency
Frame 6 – Engagement	Volunteer form, events, newsletter/updates
Frame 7 – Footer	Contact, social links, policies, quick navigation

7.6 Suggested User Journey

Visitor lands on the homepage → understands the mission → sees evidence of impact → chooses Donate or Volunteer → reviews campaign information → completes the selected action → receives confirmation → can return through updates, stories, or social channels.

7.7 UI/UX Principles

- Clarity: every section should communicate one primary purpose.
- Consistency: buttons, cards, headings, icons, and spacing should follow a shared design system.
- Trust: donations and impact information should be transparent and easy to verify.
- Accessibility: support keyboard navigation, readable text, alt text, and clear form labels.
- Responsiveness: designs should work across desktop, tablet, and mobile.
- Feedback: donation and volunteer actions should clearly show success, failure, and next steps.

8. Technologies and Tools Used

The tasks are centered on AI-assisted design and no-code/low-code workflows rather than conventional full-stack coding.

AI Tools	Ideation, wording, tagline generation, content refinement, layout suggestions, and design brainstorming.
AI Website Builder / No-Code	Wix, WordPress, Google Sites, or another suitable AI-assisted website builder.
Figma / Similar Tool	Wireframes, feature layouts, UI cards, annotations, and visual presentation.
Screenshot / Annotation	Documenting website observations and visually marking improvement areas.
Web Browser	Previewing layouts, navigation, responsiveness, and final presentation.
Design Principles	Visual hierarchy, spacing, consistency, accessibility, responsive design, and clear CTAs.

Relation to the Reference Internship Report

The reference report identifies responsive design, UI/UX considerations, project organization, Git/GitHub, and deployment as practical web-development outcomes. The present tasks extend the design side of that workflow through AI-assisted content creation, no-code website construction, screenshot-based analysis, and Figma-oriented feature planning.

9. Design and Development Methodology

9.1 Requirement Analysis

Each task was broken into its required deliverables: Task 2 required a personal profile website; Task 3 required visual analysis and improvement recommendations; Task 4 required a feature-focused NGO website design.

9.2 Planning

The next step was to define page sections, visitor goals, information hierarchy, and the main actions that should be visible. For the NGO website, donation and volunteering were treated as primary conversion paths.

9.3 AI-Assisted Content and Design

AI can be used as a design assistant rather than a replacement for human review. Draft text, headings, taglines, feature descriptions, and layout ideas can be generated and then checked for accuracy, clarity, tone, and relevance.

9.4 Visual Review

The supplied screenshots were reviewed for visual hierarchy, consistency, missing/broken content, navigation, CTA placement, credibility signals, and accessibility opportunities.

9.5 Refinement

Recommendations were converted into practical design actions, such as replacing missing images, improving campaign information, adding trust signals, strengthening accessibility, and keeping the user journey focused.

9.6 Final Presentation

The final report combines textual explanation with screenshot evidence and a structured feature proposal so that the work can be evaluated on design understanding, content quality, creativity, AI usage, and presentation.

10. Challenges and Solutions

Creating professional content	Use AI for first drafts, then edit for accuracy, concise language, and professional tone.
Choosing page structure	Start from visitor goals and use a small number of clearly defined sections.
Avoiding generic AI design	Customize colors, wording, imagery, section order, and feature priorities.
Broken/missing media	Replace the asset, add a fallback image/state, and test image paths before publication.
Building NGO trust	Provide transparent impact information, campaign status, reports, testimonials with context, and clear contact options.
Mobile usability	Use responsive layouts, stacked cards, touch-friendly controls, and narrow-screen testing.
Accessibility	Add alt text, keyboard focus states, adequate contrast, meaningful link text, and accessible forms.
Information overload	Use concise cards, headings, progressive disclosure, and clear CTAs.

11. Learning Outcomes

11.1 Technical and Design Learning

- Understanding AI-assisted website creation and content refinement.
- Understanding information architecture and page hierarchy.
- Applying UI/UX principles to real website screenshots.
- Recognizing common issues such as broken images, weak trust signals, and inconsistent information presentation.
- Planning responsive layouts for desktop and mobile.
- Understanding the role of Figma in visualizing website features before implementation.

11.2 Professional Learning

- Writing concise and professional website content.
- Thinking from the perspective of visitors, donors, volunteers, and supporters.
- Converting observations into actionable recommendations.
- Presenting design work using screenshots and structured documentation.
- Using AI as a productivity and ideation tool while retaining human review and judgment.

11.3 Expected Impact

The task series helps bridge the gap between simply creating a webpage and designing a useful digital experience. A professional website must combine visual appeal, useful content, clear actions, accessibility, responsiveness, and trust.

12. Overall Outcome

Thethree tasksform a progressive design-learning workflow. Task 2 develops the ability to create and present a personal professional profile using AI and no-code tools. Task 3 develops critical website-analysis skills by examining an existing foundation website and converting visible observations into improvement recommendations. Task 4 develops feature-planning skills by organizing NGO functionality into a clear visual layout.

Together, the tasks demonstrate how AI can support content generation and design ideation while human judgment remains essential for accuracy, usability, accessibility, organizational context, and final presentation.

Task 2 Outcome	Professional personal profile website structure with AI-improved content and presentation plan.
Task 3 Outcome	Screenshot-based website audit with prioritized UI/UX, content, accessibility, trust, and performance improvements.
Task 4 Outcome	NGO feature showcase covering donation, volunteer, campaigns, impact, testimonials, events, stories, and contact.

13. Conclusion

The AI-Based Personal Profile Website, Foundation Website Improvement Analysis, and NGO Website Feature Highlight tasks provided practical exposure to modern website design workflows. The work demonstrated that AI and no-code tools can accelerate website creation, content development, and design ideation, while careful human review is still required to maintain quality and usability.

The InAmigos Foundation screenshots also demonstrated the importance of clear calls to action, campaign visibility, impact communication, and social proof. The analysis identified practical improvements including fixing the visible campaign image issue, strengthening transparency around impact information, improving testimonial context, ensuring accessibility, and optimizing mobile usability.

Overall, the task series strengthened understanding of AI-assisted web creation, UI/UX analysis, Figma-style feature planning, responsive design, accessibility, professional content writing, and user-centered thinking.

Final Submission Checklist

- Personal profile website link inserted.
- Screenshots of the published personal website attached.
- Foundation website screenshots and annotations attached.
- Figma/feature showcase design attached.
- Final report reviewed for formatting, grammar, and completeness.

14. Supporting Documents

14.1 Foundation Website – Home Screenshot

Figure 14.1: Home/hero section supplied for analysis.

14.2 Foundation Website – Feature/Campaign Screenshot

Figure 14.2: Feature showcase, campaigns, impact, and testimonial sections.

14.3 Foundation Website – Call-to-Action Screenshot

Figure 14.3: Final “Be a Part of the Change” CTA and footer.

Evidence Note

The screenshots in this report were supplied as task evidence. No unsupported organizational statistics or claims have been added to the analysis. Where recommendations refer to impact reports, campaign information, or donor details, these are proposed improvements rather than verified facts about the organization.

Offer Letter

Dear **Ashutosh Ray**,

We are pleased to offer you the internship position of WEB DEVELOPER at InAmigos Foundation. Below are the details of your internship:

Duration of Internship: [29.08.2026--14..09.2026]

Working Hours: The working hours for this internship are flexible, allowing you to adjust according to your availability. You are expected to dedicate a reasonable amount of time to the tasks and responsibilities assigned.

Location: This internship generally allows for remote work. However, if the role requires fieldwork, you will be expected to attend fieldwork at a site near your location.

Responsibilities

- Your primary role will be related to the field of your chosen internship. All major tasks assigned to you will align with this primary focus. Additionally, you will be expected to:
- Attend team meetings and actively participate in group discussions and activities.
- Complete tasks assigned by your superiors in a timely and efficient manner. • Ensure that the tasks given to you are completed with the utmost care and responsibility.
- As a secondary responsibility, you will contribute to the organization's fundraising efforts, as this is crucial for your stipend.

Stipend: The stipend for this internship will be 20% of the donation raised by you during your internship period. The stipend is directly linked to the donations raised and may vary accordingly. Please note that while your main tasks will be aligned with your primary internship role, fundraising activities will be an essential part of your responsibilities to ensure the stipend.

Fundraising is not a mandatory task for achieving a completion certificate. It is an optional task.

Terms and Conditions:

By accepting this internship, you agree to the following:

- InAmigos Foundation may use any content you provide, including reports, presentations, and other work, in a professional manner.
- Maintain professionalism and respect at all times.
- Adhere to all foundation policies and procedures during the internship.
- All work created during the internship will remain the property of InAmigos Foundation, unless otherwise agreed.
- Maintain confidentiality regarding sensitive information.
- Meet deadlines and complete tasks as assigned. Failure to do so may result in termination.
- Inform the foundation if you can no longer continue the internship, providing the appropriate notice.

Confidentiality: You are required to maintain the confidentiality of any information you receive during your internship. You are not permitted to disclose any sensitive or proprietary information related to InAmigos Foundation's operations or donors.

Termination: Either party may terminate this agreement with written notice, subject to the terms agreed upon.

Kindly sign below to confirm your acceptance of this offer and send the signed copy to our foundation's email at inamigosfoundation@gmail.com
